Viomedex prides itself on being at the cutting edge of technology and focused customer service, which is why we are determined to continue to offer a unique approach to the manufacture of our circuits for neonatal care.

We make bespoke high quality circuits for any ventilator; an approach which we know differs from most. After all, it is reassuring to take a complete circuit out of the bag knowing it has been designed specifically to meet your requirements, put together by experts and individually checked to ensure its quality.

Our service is tailor made to suit the individual hospital or company. We first evaluate all requirements and then design and plan circuits to match these exact needs. Discussion happens throughout the design process to ensure that nothing is overlooked. Once the design has been approved, the circuit will be given a unique number that simplifies all future ordering.

Ensuring the quality of our products is paramount. However small or large your order, you can be assured that all our circuits are manufactured in the UK to the highest standards, including ISO 9001:2000, ISO 13485:2003 and CE accreditation.
